NANO-S SURFACE DISINFECTANT TABLETS

The Science Behind NANO-S

NANO-S is a chlorine-releasing product that, when mixed with water, creates hypochlorous acid (HOCl), a strong disinfectant. HOCl is naturally produced by our immune system to help fight off germs. NANO-S uses NaDCC, a chlorine compound, which turns into HOCl, making it very effective at disinfecting. This allows NANO-S to clean using less product than bleach and is safer since it's pH-neutral.

Each NANO-S tablet also contains Nano Silver, which has been proven to kill harmful pathogens. Nano Silver has been used for centuries to purify water and is made up of tiny silver particles that are safe, non-toxic, and highly effective. These particles are small (10nm to 20nm) and attached to a larger, natural antibacterial molecule (350-500nm), making it both powerful and safe.

Unlike colloidal silver, which can be harmful and cause discoloration, our silver is “cell-friendly.” It doesn't react with oxygen, making it safer for use on humans, animals, and plants without any negative effects on healthy cells.

KEY FEATURES

Highly Effective: Destroys up to 99.99% of harmful microorganisms, including bacteria, viruses, and fungi.

Fast Acting: Begins working immediately after activation, delivering results in minutes.

Eco-Friendly: The active ingredients are non-toxic and break down into natural by-products, making it safer for humans, pets, and the environment.

Convenient Tablet Form: No need for messy liquids or bulky bottles – simply activate a tablet in water for easy, on-the-go disinfection.

All NANO-S Ingredients have been approved by:

- WHO
- UNICEF
- EPA

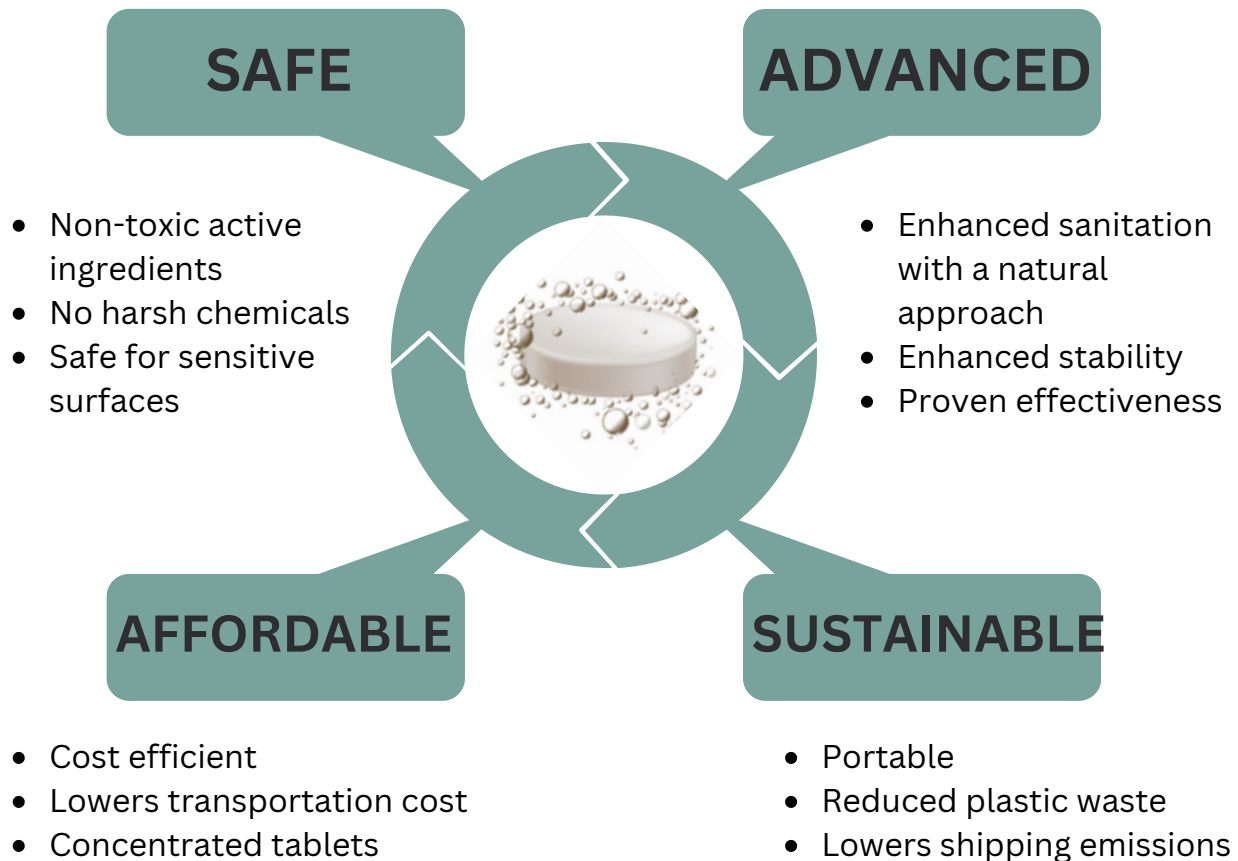

NANO-S Surface Disinfectant Tablets – the next generation of surface disinfection, powered by the combined strength of Hypochlorous Acid (HOCl) and Nano Silver.

Each tablet of NANO-S is designed to offer a fast, effective, and eco-friendly solution for disinfecting surfaces in homes, offices, healthcare settings, and industrial environments. With Sodium dichloroisocyanurate (NaDCC) as its key ingredient, NANO-S transforms into Hypochlorous Acid (HOCl) when activated with water, providing superior sanitation in an easy-to-use tablet form.

Why Choose NANO-S Surface Disinfectant
